EXPERIENCE

Senior AI Engineer at Ramp

Ramp

05/2023 - 02/2026

- Boosted operational efficiency by 35% by implementing AI-powered automation across workflows.
- Reduced financial analytics processing time by 25% through integrated ML models.
- Designed and deployed scalable AI pipelines with Python, TensorFlow, and PyTorch, supporting real-time decision-making.
- Scaled workflow throughput to 1M+ requests/month using AI-driven solutions.
- Accelerated model training by 40% by revamping data pipelines and feature engineering strategies.
- Strengthened system reliability and compliance with monitoring and observability tools, reducing incidents by 15%.
- Mentored 5+ junior engineers, enhancing team productivity and knowledge sharing.

AI Engineer at Cohere

Cohere

05/2021 - 05/2023

- Increased semantic search accuracy by 30% through development and fine-tuning of NLP models.
- Delivered end-to-end AI pipelines for text classification and generation, handling 500k+ requests/month.
- Cut inference latency by 20% on cloud infrastructure via model optimization.
- Deployed AI features impacting millions of users through cross-functional collaboration.
- Expanded training dataset coverage by 50% using preprocessing and augmentation pipelines.
- Conducted evaluation and fine-tuning to maintain 95%+ prediction quality.
- Led AI coding standards and best practices, mentoring engineers for consistent model deployment.

Software Development Engineer

Aws

05/2020 - 05/2021

- Reduced manual cloud provisioning workload by 40% with automated internal tools.
- Built backend services in Python and Node.js, improving system reliability and maintainability.
- Developed scalable APIs supporting 10+ cross-team workflows and integrations.
- Revamped data pipelines, increasing throughput by 30% and reducing latency.
- Collaborated with engineers and stakeholders to deliver robust solutions, improving release speed by 20%.

Software Engineer Intern

Capital One

06/2019 - 08/2019

- Enhanced internal tool usability by redesigning web-based financial software modules using Java and Python.
- Streamlined data processing, reducing average backend task duration by 20%.
- Improved software quality via thorough code reviews and QA testing.
- Modernized cross-team workflows by implementing backend automation improvements.

EDUCATION

Bachelor of Science, Computer Science

Duke University

08/2016 - 05/2020 Durham, United States

SUMMARY

Senior AI and Full-Stack Engineer with 6+ years of experience delivering scalable AI, NLP, and software systems across fintech, cloud, and startup environments. Improved operational efficiency by up to 35%, reduced processing time by 25%, and handled over 1M requests per month through AI pipelines, automation tools, and robust software architecture. Experienced in leading cross-functional teams, mentoring engineers, and building production-ready systems that optimize performance and reliability. Proficient in cloud-native architectures, AI/ML integration, and full software development lifecycle.

SKILLS

Frontend

Angular React.js TypeScript HTML5

CSS3 Redux Responsive Design

Backend

Java Python Node.js REST APIs

Microservices Serverless Functions

Java (Spring Boot) Event-Driven Architecture

Databases

PostgreSQL MySQL MongoDB Redis

DynamoDB RDS Vector DBs

Cloud & DevOps

AWS Kubernetes Docker Terraform

CI/CD pipelines Infrastructure as Code

Testing & Automation

Unit Testing Integration Testing

Automated Pipelines SonarQube

Observability Load Testing

AI/ML & Data Science

Machine Learning Deep Learning NLP

Transformers Model Deployment MLOps

Data Engineering AI Pipeline Development
